## Gunnebo Entrance Control...

Gunnebo offers a full range of turnstile solutions to control the flow of people into and out of buildings. We recognize the need for different solutions depending on the level of security and freedom of movement required.

The main goal of entrance security turnstiles is to regulate the flow of people in the desired direction. Some areas, such as offices or government buildings, require that each individual be identified and authorized before entry. In sports arenas or airports, the entrance system must balance freedom of movement with tight security.

*At left, the OptiStile 1080. Below left, SpeedStile FP.*

### Entrance Control for Freedom of Movement

In areas where there is a large flow of people, indoor turnstiles or speed gates provide discreet security that allow authorized individuals to pass through quickly and unhindered. Entry can be granted swiftly using a ticket, card, or biometric data.

#### *Example Products*

OptiStile Speed Gates  
SpeedStile Speed Gates  
GlasStile Entrance Gate  
SlimStile Tripod Turnstile

### Entrance Control for High Security

For a higher level of security, full-height turnstiles and security revolving doors are more appropriate. Combined with electronic access control—such as a code, swipe card or biometric data—our full-height entrances provide the means to keep unauthorized individuals out of sensitive areas.

# Tripod Turnstiles

**SlimStile BA**  
**SlimStile EV**

*...user-friendly*  
*security*

The Tripod Turnstile is a compact, cost-effective entrance solution with low power consumption and high reliability. Choose from standard versions or custom-designed. Suitable for internal or external use in areas of large traffic flow.

*SlimStile EV*

*SlimStile BA*

## Tripod Main Features

- High flow rate: 35 people per minute
- For internal or external use
- Bi-directional passage
- Single or double walkways
- Choice of static fixed arm or drop arm
- Emergency setting for safe evacuation
- Stainless steel construction

# Entrance Gates

## GlasStile S

Entrance Gates are designed to combine smooth operation with uncompromised security. Easy to use for visitors, allowing simple and secure entry into a building. Available in a wide range of finishes.

*Tandem GlasStile-S*

*GlasStile S*

*The GlasStile S (right) provides a convenient complement to the OptiStile 1080.*

### Entrance Gate Main Features

- High flow rate: 35 people per minute
- Motorized or manual entry for building interiors
- Bi-directional passage
- Extra-wide models for ADA or freight access
- Emergency setting to allow for safe evacuation
- Range of designs, styles, and widths

*...sleek, contemporary design*

**GUNNEBO®**

# Full-Height Turnstiles

*ClearSec*

ClearSec  
RotaSec  
PedGate

*...robust and reliable  
construction*

*RotaSec with PedGate*

Available as both internal and external solutions, full-height turnstiles are designed for entrances to industrial plants, sports arenas, military sites, or anywhere you need a high degree of security without manned monitoring. The level of security can be increased with integration of an access control device such as a card reader.

## Full-Height Turnstile Main Features

Medium flow rate: 17 people per minute  
For internal or external use  
Bi-directional passage  
Optional cardreader or pushbutton entry  
Choice of rotor designs, finishes, and colors  
Emergency setting to allow for safe evacuation  
90° or 120° configuration

# Full-Height High Security

**VertaSec  
HiSec**

*...elegant design and  
high security*

## Full-Height High Security Main Features

- Medium flow rate: 20 people per minute
- For internal or semi-external use
- Bi-directional passage
- Optional cardreader or pushbutton entry
- Choice of exteriors and finishes
- Emergency setting to allow for safe evacuation

*VertaSec*

Providing an elegant and extremely secure solution, security portals and revolving doors are ideal for high-profile buildings requiring tight security. The doors prevent tailgating and piggybacking and can be fitted with a range of detection systems to achieve the appropriate level of security.
